WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Reports (Form 86ab) rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is promptly requested and the fact that they have been so questioned is indicated by the symbol (:).

MORBIDITY DATA

In this report admission rates are shown for all causes (disease and injury) combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparison with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time if the current week's experience continued through the year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases of the rarer communicable and certain other diseases.

The number of patients remaining in hospital at the end of the week per 1000 strength, as given in this report, furnishes an approximation to the current non-effective rate. The mean number of non-effectives per 1000 strength is given in the summary table for the total United States and for each of the Service Commands.

HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of bed capacity (normal and total), beds occupied and beds "available vacant." The number of beds "available vacant" is defined as 80% of the total bed capacity less the corresponding beds occupied. The number of beds "available vacant" for each Service Command is the total of the beds "available vacant" for only those stations in which 80% of the total bed capacity exceeds the beds occupied. Beds in dispensaries, convalescent facilities, venereal disease facilities and college training detachments are not included in this report.

In the case of general hospitals there are shown, in addition, the total number of patients admitted and disposed of each week, the number of patients admitted by transfer and the number of battle casualties admitted and disposed of.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) has been placed after admission rates computed on the basis of 5 or fewer cases.

The symbol # has been placed after the names of stations (or groups of stations) where part or all of the data for the current week has not been received and the latest available figures have been substituted.

WEEKLY HEALTH REPORT

WEEK ENDING 23 OCTOBER 1943.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES AS A WHOLE

As indicated in the chart on page 3, the admission rates from all causes and from all diseases combined rose slightly during the week ending 23 October 1943.

Since the middle of September the admission rates from all causes and from all diseases combined have shown only slight fluctuations about a very low level. The admission rate from all causes has varied from the 1943 low of 700 per thousand registered during the week ending 25 September to 710 per thousand reported for the current week. The admission rate from all diseases combined has varied from the 1943 low of 613 per thousand registered during the week ending 2 October and again 16 October to 624 per thousand reported for the week ending 18 September.

As compared with the corresponding week in 1942, the admission rates from all causes and from all diseases combined were both about 5 per cent higher.

The current week's admission rate from colds, influenza, etc. was substantially the same as that prevailing during the four weeks ending 23 October or about 35 per cent below October 1942.

VARIATIONS IN MORBIDITY BY SERVICE COMMAND

During the week ending 23 October 1943 there was a marked increase in the admission rates from all causes and from all diseases combined in the Third Service Command and a slight increase in the Fourth Service Command. In the First and Second Service Commands and the Military District of Washington there were decreases in the admission rates from all causes and from all diseases combined.

The admission rates from all causes and from all diseases combined continue very low in the First Service Command and the Military District of Washington. In recent weeks the Fourth Service Command has shown the highest rate of admission from all causes and from injuries.

The admission rate from colds and influenza increased markedly in the Sixth and Seventh Service Commands and decreased markedly in the First and Fifth Service Commands as well as the Military District of Washington.

CURRENT HOSPITALIZATION CONDITIONS

The total bed capacity (excluding beds currently reported as "expansion beds", beds in dispensaries, convalescent facilities, venereal disease facilities, and college training detachments) increased slightly during the week and on 23 October stood closer to the 350,000 mark. The number of beds occupied on that date decreased to about 188,000 and the number of "available vacant" beds increased to nearly 90,000. There were 35 stations with a total bed capacity of some 27,000 beds which had no "available vacant" beds.
